## Prescription for the Flu

National Safety Council has developed a new program based on the latest OSHA Guidance document (#3327-02N 2007) on preparing workplaces for an influenza pandemic. Prescription for the Flu is an affordable two-hour program that will raise awareness of the prospect of a pandemic flu outbreak and the serious threat it poses. National Safety Council's Influenza Pandemic Program is a practical solution to the challenge of preparing and protecting your employees and their families.

**Prescription for the Flu** is administered in two parts. One part helps top members of management understand how an influenza pandemic might affect their business and encourages them to plan for a potential outbreak. The second part trains employees in ways to prevent the flu by giving them the knowledge and skills to:

- Identify the various types of influenza strains
- Describe the conditions that create a pandemic
- Recognize the warning signs of an influenza epidemic
- Identify steps they can take to protect themselves and their families from the flu
- Identify the actions they should take if they or their family members get the flu

This course is intended for employees or volunteers of all organizations, community members, students—anyone that may be affected by a potential pandemic.

### Prescription for the Flu Facilitator Kit

Product #: 73819-0000 Price: \$125.00
